

**Strengthen** the group by harnessing each individual's physiology

# Synergy Solution

Measure data from 2 individuals simultaneously to quantify empathy, maintain engagement, and guide open communication.

Perfect tool to effectively guide family therapy, couples counselling, and group dynamics.

Gamify self-regulation practice for athletes with biofeedback and competitive training.

The Synergy Solution uses the eVu TPS finger sensors to access each user's heart rate variability, arousal, and temperature. From there, we can see how they feel, if they are engaging, and how to best help them.

Stop guessing if the patients are taking the group therapy to heart.

Synergy Solution allows you to measure their progress and understand their reactions to each other.
