

We are excited to introduce the latest revision of the **eVu Senz Android app**, which includes significant improvements to user experience, signal processing, and report generation. This update provides users with an enhanced and more intuitive interface and advanced signal processing for breath patterns. Here's a breakdown of the key features in this release:

1. **Comprehensive UI Redesign:** The entire application now features a new user interface design, including a bottom bar menu for more intuitive and easier navigation.

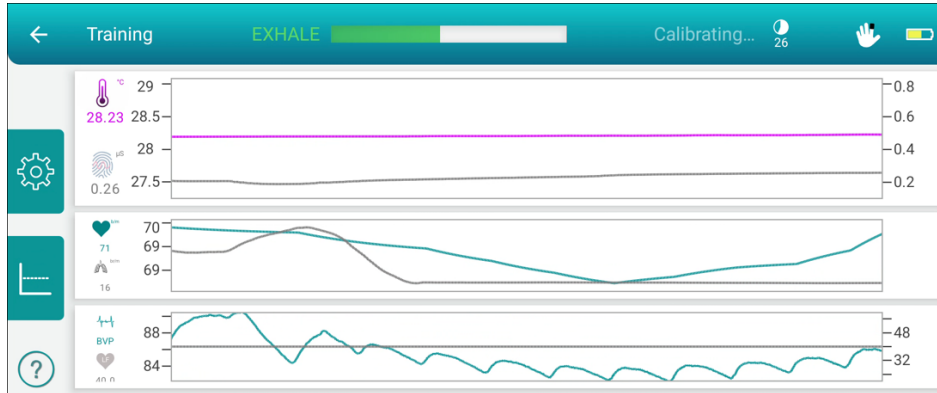

2. **Improved calibration Interface:** The calibration UI allows the user to change session setting seamlessly while in calibration mode.

3. **Revamped Rewards View:** The new Rewards view screen boasts a larger central circle, enhancing the visual appeal and user experience.

4. **Optimized Signal View:** The Signal view has been refined with smoother and faster signal graphs, along with an improved breath rate detection algorithm for more accurate readings.

5. New Review Screen Features:

- a) **Star Ranking System:** A star ranking system has been added to provide quick visual feedback.
- b) **Graphical Modalities:** The screen now displays graphs for 1-3 modalities, offering a clearer overview of performance.
- c) **Trend Analysis:** Points per minute trends within the session are now shown, helping users track their progress.
- d) **Session Calendar:** A calendar feature has been added for selecting past sessions, making it easier to review previous data.

- Redesigned Session Reports:** The Session PDF report has been newly designed. Also added the capability to send raw data in .CSV file format to the clinician for detailed analysis.

Overall Redesigned User Interface (UI)

- **New Signal View and Reward View Screens:** We've refreshed the signal and reward screens to enhance usability and provide clearer, more actionable data. The new design allows users to easily monitor and interact with their biofeedback signals and reward-based metrics.
- **New Review Screen:** A brand-new review screen provides a comprehensive overview of your session, with a clearer display of data and progress over time, helping users better track their biofeedback journey.
- **New PDF Report Design:** The design of the generated PDF reports has been significantly updated for improved readability and professional presentation, ensuring your results are easy to understand and share.
- **Support for Opening PDF Reports from the App:** You can now open and view PDF reports directly within the app, making it more convenient to access your session history and data without leaving the app.

Improved Signal Processing Algorithm

Our improved signal processing algorithm now delivers more accurate and detailed tracking of breath waveforms and breath rate. With enhanced precision, users can expect more reliable feedback on their breathing patterns, allowing for deeper insights and more effective biofeedback training.

This update reflects our ongoing commitment to improving the eVu Senz experience and providing users with the best possible tools for biofeedback training. We hope you enjoy these new features and improvements!
